

I am strongly opposed to HR 4026. I have become a huge fan of satellite radio since first subscribing in November 2002. XM radio offers its PAYING subscribers a valuable service by providing commercial free entertainment and, more recently, local traffic and weather conditions. It is equivalent to the cable television revolution approximately 20 years ago. Any attempt by the NAB to restrict satellite radio's services is nothing more than restraint of free trade and business. I urge you to defeat this bill.
